

# Alpaca Follicle Cycle Chart

Females will become receptive every 5.75 days.  
 Hold females for breeding for the first 20 days after birth.  
 The first day you can breed her is on the 21st day.

*Much of the information on this chart was made available from Bob and Barb Hance (Hance Ranch) on research from Dr. Walter Bravo, DVM from studies he conducted at the Alpaca Research Station in LaRaya, Peru.*

*(This chart and accompanying document was prepared by Ron Hinds, el Zorro Colorado Alpacas).*
